

Amaranta is an early primocane variety. The harvest is fast thanks to fruits ease to pick and the plant structure that makes all the fruits visible and accessible. The fruits have a great aromatic taste and a high sugar content.

Plant

Type	Primocane
Habit	Medium robustness Contained, semi-upright structure Laterals in the apical area and short length
Productivity	Medium
Production period	Autumn: early Spring: early

Fruit

Shape	Conical
Colour	Light red tending towards pink
Size	Medium (average fruit weight: 5.3g)
Firmness	High
Detachment	Very easy
