

Dafne is a primocane variety suitable for double cropping. Furthermore, the plant structure allows to grow long-canes for programmed floricanes productions. This cultivar easily adapts to both cool and warm environmental conditions. Dafne's fruits are definitely our most interesting between are new varieties: are characterized by a constant high size, a brilliant, intense and attractive colour and a much inviting taste.

Plant

| | |
|----------------------|--|
| Type | Primocane but can also be use as a floricanes |
| Habit | Robust and hardy Contained and self-sup- porting Small number of laterals at the base High number of fruiting laterals in spring |
| Productivity | Autumn: medium Spring: high |
| Production period | Autumn: early Spring: mid-season |

Fruit

| | |
|------------|--|
| Shape | Conical |
| Colour | Bright intense red |
| Size | Medium-large (average fruit weight: 6.4g) |
| Firmness | High |
| Detachment | Easy |
