

Titania is a primocane variety characterized by an extreme vigour and an excellent yield. Its strong point definitely is the high size of its fruits: its first fruits can weigh more than 10 grams, leading to a remarkable increase in the picking speed. The colour of the fruit is light, and its shelf-life is good. We recommend autumn-only yield.

Plant

Type	Primocane
Habit	Very robust Spreading habit Very long fruiting laterals mainly located in the mid-upper section of the plant
Productivity	Very high
Production period	Autumn: mid-late

Fruit

Shape	Elongated cone
Colour	Light red
Size	Large (Average fruit weight: 6,5g)
Firmness	Medium
Detachment	Good, however at low temperatures it is recommended to harvest the fruits during the hottest hours of the day
